KAITLYN MORRISON  
ILLUSTRATION/GRAFIC DESIGN

**IDEAS**

The word "IDEAS" is written in large, bold, black-outlined letters across the center of a brain-like shape. The brain is depicted with a pinkish-red hue and internal structures like the cerebral cortex and ventricles. The background is a bright yellow with scattered black speckles. Surrounding the brain are various organic shapes: two large, branching, tentacle-like forms in red and purple at the top; a smaller purple branching form at the bottom left; a white, jagged, mountain-like shape on the right; and several small, dark blue starburst or nail-like shapes scattered around.

# REGAL JUMPING SPIDER

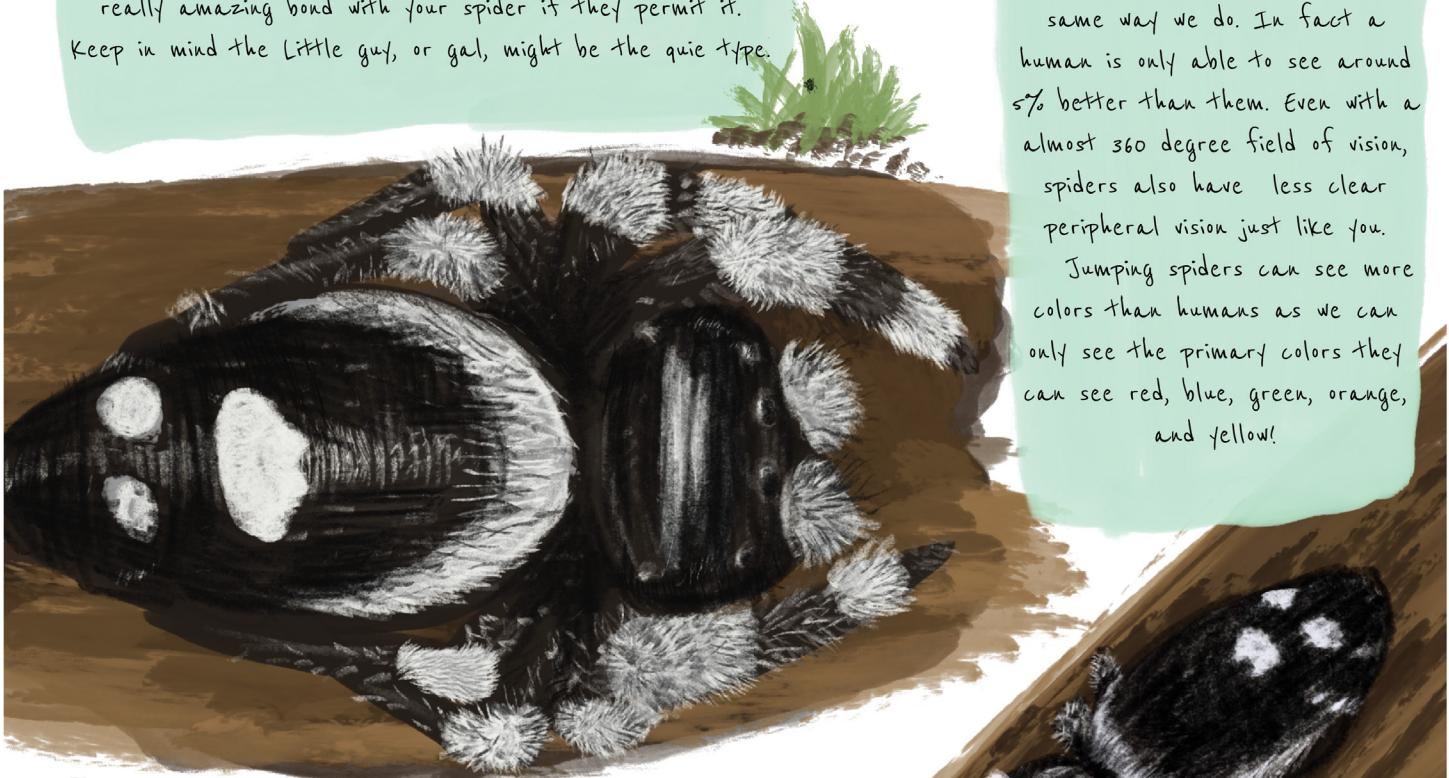

For Beginners

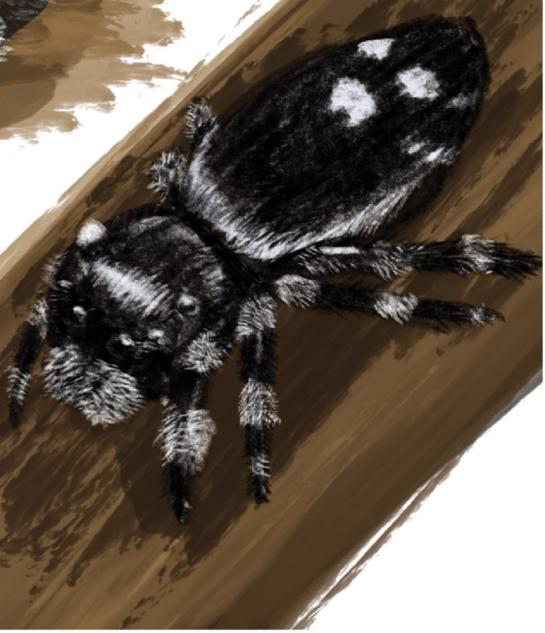

The male regal jumping spider has black and white coloring as illustrated. The female regals are either orange or gray with a mix of spots and stripes. Each jumping spider has it's own Personality and has the ability to Recognize faces! This means you can form a really amazing bond with your spider if they permit it. Keep in mind the Little guy, or gal, might be the quiet type.

Jumping spider's eyes are camera lens esque and are quite similar to humans as they have the ability to focus on a object in the same way we do. In fact a human is only able to see around 5% better than them. Even with a almost 360 degree field of vision, spiders also have less clear peripheral vision just like you.

Jumping spiders can see more colors than humans as we can only see the primary colors they can see red, blue, green, orange, and yellow!

As the smartest species of spiders, expect them to watch you more then you watch them! The lifespan of a regal is around 1-2 years. However, they are very friendly and quite active so you will certainly enjoy your new friend. Being able to watch your spider grow and learn its personality is a exciting experience you wont forget
